Fastly Expands Domains API and TLS Capabilities with Domainr Acquisition and General Availability of Certainly Certification Authority

August 17, 2023

Advancements propel Fastly's mission to enhance trust and security for its customers and across the internet

SAN FRANCISCO--(BUSINESS WIRE)-- Fastly, Inc. (NYSE: FSLY), a leader in global edge cloud platforms, today announced two major developments in its domain name API and Transport Layer Security (TLS) capabilities: the acquisition of Domainr, an ICANN-accredited real-time domain availability API provider, as well as general availability of Certainly, Fastly's publicly-trusted TLS Certification Authority (CA). These developments significantly advance Fastly's edge cloud platform as well as its mission to foster a global web infrastructure that is more accessible, trusted and secure.

"Through the availability of Certainly and the acquisition of Domainr, we are continuing to empower our customers to own and control what they create, and how they create it – all backed by the most trusted and reliable domain availability and TLS experience possible," said Fastly CEO Todd Nightingale. "By offering these fundamental building blocks alongside our industry-leading content delivery network, Compute@Edge, and beyond, Fastly is proud to be an engine for the best builders and the best platforms on the internet."

Certainly provides simple, trusted TLS certificates for Fastly customers

TLS provides security and legitimacy to websites or applications by serving traffic over HTTPS. For TLS to work, domains need to be validated and approved by a trusted CA that issues certificates to web servers, thus confirming ownership of a site. In response to several CA incidents affecting Fastly customers, Fastly set out to create a modern CA that embraces industry best practices, and released Certainly in limited availability in February 2023.

Certainly gives users the option to create and manage certificates issued by Certainly to secure any website or application programming interface (API) endpoint served by Fastly. By bringing the essential capability of issuing TLS certificates in-house, Certainly gives Fastly greater control over the level of service it provides throughout the entire certification lifecycle, from provisioning to renewing, all backed by Fastly's speedy global delivery network. By offering a 30-day validity period paired with automation, Certainly achieves a higher level of security by reducing the time in which a compromised certificate is usable. Certainly also simplifies management of certificates and renewals, even for hundreds of thousands of domains.

Domainr acquisition sets the stage for enhanced domain simplification and security

As a direct complement to Certainly's role in verifying the authenticity and trustworthiness of a website and domain, the acquisition of Domainr will enable Fastly to integrate Domainr's real-time domain availability API into Fastly services and infrastructure. With direct, privileged access to top-level domain registries, the Domainr API instantly checks if a domain is available, with no false positives. The API also helps customers monitor critical domains and uncover at-risk domains before they change hands.

"Domains are one of the primary foundations for trust and identity on the internet, but they have often been complex or inaccessible to work with. Domainr is truly unique, and this small acquisition sets the stage for Fastly to innovate in making it faster, safer and easier for everyone to build on the power of domains," said Anil Dash, Head of Glitch and Vice President of Developer Experience at Fastly. "Just as Fastly's security products look at the entire internet as a whole to anticipate and prevent attacks, Domainr's API and unique view of the domain name ecosystem will enable new ways of preventing risks around domains in the future. Added together, Certainly and Domainr are great examples of how Fastly is working to make the entire internet better for all users, at every layer of its infrastructure."

Domainr also helps developers brainstorm for ideation and creation of app and business names with its instant search and context-aware suggestion capability, highlighting relevant and available top-level domains even if the .com is taken.

Fastly customers can now look forward to superior end-to-end services and customer support for all TLS and domain name availability needs as Fastly continues to expand its infrastructure capabilities.

About Fastly

Fastly's powerful and programmable edge cloud platform helps the world's top brands deliver the fastest online experiences possible, while improving site performance, enhancing security, and empowering innovation at global scale. With world-class support that achieves 95%+ average annual customer satisfaction ratings, Fastly's beloved suite of edge compute, delivery, security and observability offerings has been recognized as a leader by industry analysts such as IDC, Forrester and Gartner. Compared to legacy providers, Fastly's powerful and modern network architecture is one of the fastest on the planet, empowering

developers to deliver secure websites and apps at global scale with rapid time-to-market and industry-leading cost savings. Thousands of the world's most prominent organizations trust Fastly to help them upgrade the internet experience, including Reddit, Pinterest, Stripe, Neiman Marcus, The New York Times, Epic Games, and GitHub.
